KNOX BROTHERS

LUXURY MARKET INTELLIGENCE

LUXURY CLIENT PERSONA INTELLIGENCE REPORT

Universal Buyer Profiles, Decision Frameworks & Market Intelligence Specifications

A Knox Brothers Intelligence Framework

Applicable Across All Luxury Real Estate Markets • 2025–2026

How to Use This Framework

This document is a universal reference framework for luxury real estate intelligence. It profiles the buyer personas most active in high-end markets worldwide — their psychology, decision drivers, and what it takes to earn their trust. It is market-agnostic by design: the persona profiles, priority matrices, narrative framing, and report specifications apply whether the target market is Naples, Aspen, Manhattan, Malibu, or Miami Beach.

Part One profiles eight universal luxury buyer archetypes with their motivations and decision frameworks. Part Two provides full intelligence specifications for seven core personas — including priority matrices, report metrics, property filters, narrative framing, and agent talking points.

Each persona in Part Two includes a Sample Benchmark Data table populated with Naples 2025 figures as a worked example. This shows the agent what data to gather and how to present it. When generating a report for any other market, the AI agent must replace all benchmark figures, community names, price tiers, and market-specific statistics with data sourced from the target market. Naples figures should never be presented as representative of another market.

> **Agent Instruction:** Before generating any persona-lensed report, confirm the target market with the purchasing agent. Source local market data to replace all sample benchmarks. The persona psychology, decision drivers, and narrative framing remain constant — only the market data changes.

PART ONE: Universal Luxury Buyer Archetypes

An overview of the most common ultra-luxury real estate buyer personas across all markets, including their motivations, decision frameworks, and what resonates most in the acquisition process. These archetypes are universal — they apply regardless of market geography.

Persona	Primary Motivation	Buying Lens	What Wins Them Over	Biggest Fear
Business Mogul	Status + Asset Strategy	ROI + Tax + Leverage	Data, market intelligence, exclusivity	Overpaying
Legacy Builder	Generational Wealth	Long-term hold	Story + emotional significance	Regret
Coastal Escape Seeker	Balance + Lifestyle	Experience	Design + tranquility	Maintenance burden
Global Nomad	Flexibility + Access	Portfolio diversification	Concierge-level service	Complexity
Celebrity / Public Figure	Privacy + Security	Discretion	Off-market access	Exposure
Tech Founder	Speed + Optionality	Liquidity strategy	Efficiency + innovation	Wasted time
Trophy Collector	Prestige	Scarcity	Architectural significance	Being ordinary
Family Office Buyer	Structured Wealth	Capital allocation	Institutional-grade analysis	Poor due diligence

1. The Business Mogul

- **Profile:** Founder, CEO, PE partner, hedge fund manager; often multi-home owner.
- **Decision Framework:** IRR, appreciation trajectory, liquidity profile, market timing.
- **What Resonates:** Absorption rates, off-market deal flow, negotiation leverage.
- **Core Driver:** Smart capital allocation.

2. The Legacy Builder

- **Profile:** Wealth from operating businesses or inheritance; 20–30 year horizon.
- **Motivations:** Generational memories, permanence, pride of ownership.
- **What Resonates:** Timeless design, market stability, architectural story.
- **Core Driver:** Meaning and legacy.

3. The Coastal Escape Seeker

- **Profile:** High-stress primary city residence; second-home market buyer.

- **Motivations:** Simplicity, wellness, low maintenance.
- **What Resonates:** Turnkey design, lock-and-leave convenience.
- **Core Driver:** Peace and balance.

4. The Global Nomad

- **Profile:** Splits time across multiple global cities; often owns via LLC or trust.
- **Motivations:** Geographic diversification, capital preservation.
- **What Resonates:** Seamless execution, tax coordination, concierge service.
- **Core Driver:** Efficiency and global competence.

5. The Celebrity / Public Figure

- **Profile:** Athlete, entertainer, high-profile founder.
- **Motivations:** Security and discretion.
- **What Resonates:** NDAs, private showings, off-market confidentiality.
- **Core Driver:** Privacy.

6. The Tech Founder

- **Profile:** Recently liquid from exit or IPO; under 45; data-driven.
- **Motivations:** Speed and innovation.
- **What Resonates:** Transparent dashboards, automation, frictionless process.
- **Core Driver:** Efficiency.

7. The Trophy Collector

- **Profile:** Multi-property owner; collects art, cars, yachts.
- **Motivations:** Scarcity and prestige.
- **What Resonates:** Provenance, rarity, global comps.
- **Core Driver:** Status curation.

8. The Family Office Buyer

- **Profile:** Advisor-led generational capital.
- **Motivations:** Capital preservation and risk-adjusted return.
- **What Resonates:** Institutional-grade underwriting, macro + micro thesis.
- **Core Driver:** Structured allocation.

PART TWO: Persona Intelligence Specifications

Universal AI agent configuration and BI analyst reference specifications for the seven core luxury buyer personas. Each persona includes decision driver analysis, report metrics, property filters, narrative framing, and agent talking points.

All benchmark tables in this section are populated with Naples 2025 data as worked examples. The AI agent must replace all figures with target market data before generating any client-facing report.

PERSONA 01

The Private Equity & Finance Principal

Treats real estate as an asset class. Every purchase is underwritten.

Profile Overview

This buyer approaches luxury real estate with the same analytical rigor they apply to portfolio management. They evaluate properties through an investment lens — total return potential, basis relative to replacement cost, comparable market performance, and exit optionality. They are typically acquiring a primary or secondary residence but still expect institutional-quality data to support their decision. They value efficiency in the transaction process, are almost always cash buyers, and make decisions quickly once the data supports the thesis.

Demographics & Psychographics

These ranges are universal across luxury markets. Individual thresholds may shift slightly by market — e.g., net worth floors may be lower in emerging luxury markets and higher in ultra-prime urban markets.

Attribute	Detail
Age Range	45–65
Net Worth	$20M–$200M+
Primary Residence	Major financial centers — New York, Chicago, San Francisco, London, Singapore
Purchase Type	Secondary/tertiary residence, potential primary relocation
Transaction Speed	Fast — 30–60 day decision cycle once engaged
Financing	Cash (91%+ at top tier in high-end markets)
Information Style	Data-dense, quantitative, institutional format
Trust Signals	Comparable analysis, market positioning data, track record

Decision Drivers & Priority Matrix

Factor	Weight	What They Evaluate
Asset Appreciation	Critical	3-year and 5-year CAGR by micro-market, price trajectory vs. comparable luxury markets nationally
Basis / Value	Critical	Price per square foot vs. replacement cost, SP/OLP ratio indicating market efficiency
Liquidity / Exit	High	Days on market trends, transaction velocity, buyer pool depth
Privacy / Security	High	Gated access, lot size, community exclusivity metrics
Lifestyle Amenities	Moderate	Club quality, proximity to private aviation, dining infrastructure
Design / Condition	Moderate	Prefers turnkey or new construction; avoids renovation risk

Report Intelligence Specifications

The metrics below define what this persona needs to see in any market. The specific data points will vary by market — the agent should source equivalent local data for each metric.

CAGR by Micro-Market

3-year and 5-year compound annual growth rate for the target zip code or neighborhood, benchmarked against comparable luxury markets. This buyer compares real estate against alternative asset classes.

Price Per Square Foot Trends

Quartile analysis showing where the target property sits relative to market. Provide median $/sqft by price tier in the target market.

SP/OLP Ratio (Pricing Discipline)

Measures market efficiency. A ratio near 1.0 signals a well-priced, efficient market. Report this metric by price tier in the target market.

Cash Transaction Percentage

Signals buyer composition and market stability. All-cash markets are less susceptible to interest rate disruption. Report this metric for the target market.

Days on Market by Price Tier

Liquidity proxy. Report median DOM by price tier in the target market. Longer DOM at higher tiers is often structural, not distress.

Property Filter Criteria

Attribute	Detail
Price Range	$4M–$25M+ (adjust to local luxury threshold)
Property Type	Single Family primary; waterfront or premium view properties
Community Type	Gated, waterfront, or golf community with exclusivity signals
Year Built	2010+ preferred; new construction (2020+) weighted
Waterfront	Include waterfront premium analysis where applicable
Key Developments (Example — Naples)	Port Royal, Aqualane Shores, Park Shore, Pelican Bay, Grey Oaks, Quail West

Narrative Framing

Language & Tone

Institutional and precise. Mirror the language of an investment memo or due diligence report. No adjectives like 'stunning' or 'breathtaking.' Use quantitative framing: 'This micro-market has delivered 8.2% CAGR over three years, outperforming the broader luxury index by 210 basis points.'

Key Vocabulary

basis, alpha, total return, replacement cost, cap rate proxy, risk-adjusted, absorption rate, pricing efficiency, market positioning, exit optionality, basis points, underwriting, comparable analysis

Avoid

dream home, paradise, stunning views, luxury living, resort-style, entertainer's delight, turnkey paradise

Agent Talking Points

The following are illustrative talking points built on Naples 2025 data. They demonstrate the type of data-driven conversation this persona responds to. When generating a report for a different market, the AI agent must rebuild these points using equivalent local metrics — the structure and tone remain constant, but all figures, community names, and market references must reflect target market data.

- [Target market] ultra-luxury segment saw $[X]B in closed volume in [year], a [X]% increase year-over-year. Capital is flowing into this market at an accelerating rate. (Naples 2025 example: $1.39B, up 64% YoY at the $10M+ tier.)
- At the top price tier, [X]% of transactions are cash. This market is insulated from interest rate volatility in a way that most luxury markets are not. (Naples 2025 example: 91.1% cash at $10M+.)
- [Top 2 communities] represent [X] of the [Y] ultra-luxury waterfront transactions. These micro-markets have the deepest liquidity pools for high-value exits. (Naples 2025 example: Port Royal and Aqualane Shores, 43 of 120 transactions.)
- The SP/OLP ratio at the [X]–[Y] price tier is [Z] — the tightest in the market. Sellers in this tier are pricing with discipline. (Naples 2025 example: 0.919 at $6M–$10M.)
- New construction represents [X]% of all luxury transactions — a meaningful supply signal that should be factored into any appreciation forecast. (Naples 2025 example: 21%.)

Sample Benchmark Data — Naples 2025

These figures are provided as a worked example using Naples 2025 transaction data (2,234 closed sales, $1M+, $6.58B total volume). Do not present these as benchmarks for any other market. The AI agent must source and substitute local data when generating reports for other markets.

Metric	Naples 2025 Benchmark
Total Luxury Transactions ($1M+)	2,234 closed sales, $6.58B total volume
Ultra-Luxury ($10M+) Volume	$1.39B (up 64.2% YoY, 79 transactions)
Cash Transaction Rate	86.7% luxury, 91.1% ultra-luxury
Median SP/OLP Ratio	$6M–$10M: 0.919 | $10M+: 0.878
Median DOM	$6M–$10M: 98 days | $10M+: 101 days
Price Per Sqft (Median)	$6M–$10M: $1,499 | $10M+: $2,103
Waterfront Premium ($10M+)	71.6% of $10M+ transactions are waterfront
Peak Transaction Months	March–June (highest volume and velocity)

PERSONA 02

The Legacy Wealth & Multigenerational Family

Building a family compound, not buying a house. Every decision is measured in decades.

Profile Overview

This buyer is acquiring property as a long-term family asset — often with the intention of creating a compound or estate that serves multiple generations. Purchase decisions involve extended family input, trust and estate planning considerations, and a focus on physical scale (lot size, expansion potential, privacy). They are drawn to established, prestigious communities with membership infrastructure and social continuity. They rarely sell, which means they also value scarcity and exclusivity as markers of long-term asset preservation.

Demographics & Psychographics

These ranges are universal across luxury markets. Individual thresholds may shift slightly by market.

Attribute	Detail
Age Range	55–75 (primary decision-maker); multigenerational input
Net Worth	$50M–$500M+
Primary Residence	Established wealth corridors — Northeast US, Chicago, California, London, Toronto
Purchase Type	Primary winter/seasonal estate or family compound
Transaction Speed	Slow — 6–18 month evaluation period, family consensus required
Financing	Cash / trust purchase
Information Style	Comprehensive but understated; values discretion in presentation
Trust Signals	Community pedigree, membership exclusivity, long-hold owner tenure

Decision Drivers & Priority Matrix

Factor	Weight	What They Evaluate
Lot Size & Expansion	Critical	Minimum 0.3+ acres; compound potential, buildable area, setback flexibility
Community Prestige	Critical	Membership waitlists, member demographics, average tenure, social infrastructure
Privacy & Security	Critical	Gated, low-density, buffer zones, security infrastructure
Estate Planning	High	Trust-friendly ownership structures, property divisibility, zoning for guest houses
Scarcity	High	Limited inventory in target communities, turnover rates, new development restrictions
Architectural Heritage	Moderate	Established homes with renovation potential; not necessarily new construction

Report Intelligence Specifications

Lot Size Distribution

Provide median lot size for large-format single-family homes at the target price tier. Flag all lots exceeding 0.5 acres and compound-feasible parcels specifically.

Community Turnover Rate

Low turnover signals satisfied, long-hold owners. Calculate annual sales as a percentage of total homes in each community.

Membership & Fee Analysis

Club initiation fees, annual dues, membership categories (equity vs. non-equity), waitlist status. This often drives community selection more than property features.

Scarcity Index

Available inventory as a percentage of total community homes. Communities with <3% available inventory signal scarcity premiums this buyer will accept.

Owner Tenure Distribution

Average years of ownership within target communities. Higher tenure signals community stability — the primary criterion for this buyer.

Property Filter Criteria

Attribute	Detail
Price Range	$4M–$30M+ (adjust to local luxury threshold)
Property Type	Single Family only
Lot Size	0.30+ acres minimum; flag 0.50+ acres as priority
Community Type	Gated, Golf Course preferred; established prestige communities
Year Built	All years — do not exclude older construction
Key Developments (Example — Naples)	Port Royal, Aqualane Shores, Grey Oaks, Quail West, Mediterra, Pelican Bay, Pine Ridge

Narrative Framing

Language & Tone

Understated and authoritative. Mirror the tone of a private wealth advisory letter, not a sales pitch. Emphasize heritage, stewardship, and long-term value. Use phrases like 'this community has maintained its positioning for three decades' rather than 'this is a great investment.'

Key Vocabulary

stewardship, legacy asset, family compound, generational, estate-scale, preservation, heritage community, owner tenure, membership equity, enduring value, compound potential

Avoid

hot market, investment opportunity, flip potential, up-and-coming, trendy, starter home, ROI

Agent Talking Points

- [Top 2 communities] account for [X] of the [Y] large-lot luxury transactions in [year]. These communities have the physical scale and zoning flexibility for compound development. (Naples 2025 example: Port Royal and Aqualane Shores, 49 of 222 transactions.)
- The median lot size for [price tier]+ single-family homes in [market] is [X] acres. At the ultra-luxury tier, you're looking at parcels that can accommodate primary residences, guest houses, and generational planning.
- [Top golf/estate communities] each recorded [X–Y] large-lot transactions in [year]. These are established communities with low turnover and membership infrastructure that supports long-term residency.
- [X]% of luxury inventory in this market was built [decade range], offering both renovation opportunities on heritage properties and newer construction within established enclaves.
- [X]% of luxury transactions occur within gated communities. For families prioritizing security and privacy, this market's community structure is inherently aligned with legacy ownership.

Sample Benchmark Data — Naples 2025

These figures are provided as a worked example using Naples 2025 transaction data (2,234 closed sales, $1M+, $6.58B total volume). Do not present these as benchmarks for any other market. The AI agent must source and substitute local data when generating reports for other markets.

Metric	Naples 2025 Benchmark
Large-Lot SFH Transactions ($4M+, 0.3+ acres)	222 sales, median price $7.1M
Median Lot Size ($4M+ SFH)	0.49 acres
Top Legacy Communities	Port Royal (25), Moorings (25), Aqualane Shores (24), Grey Oaks (18), Quail West (18)
Gated Community Penetration	89.1% of all luxury transactions
Year Built Mix	Pre-1990: 21% | 1990s: 21% | 2000s: 17% | 2010s: 23% | 2020+: 18%
Pool Prevalence ($10M+)	90.5% of $10M+ properties have private pools
Waterfront Prevalence ($10M+)	71.6% of $10M+ are waterfront

PERSONA 03

The Retiring UHNW Individual

The career was the journey. This is the destination — curated, effortless, and exactly right.

Profile Overview

This buyer has already won. They are transitioning from a life defined by professional achievement into one curated around lifestyle, wellness, and personal fulfillment. At the UHNW tier, this is not about downsizing — it is about upgrading their relationship with time and environment. Golf, yachting, climate, safety, and world-class wellness amenities are not nice-to-haves; they are the baseline. They seek communities that match their social peer group and offer a full ecosystem of resort-caliber infrastructure. Many are relocating from high-cost or cold-weather primary markets and view this acquisition as a permanent lifestyle platform, not simply a seasonal property.

Physicians, attorneys, senior partners, and C-suite executives at the upper end of this persona may have net worth in the $5M–$30M range, while UHNW retirees from private equity, family business exits, or generational wealth can extend well into the $50M–$200M+ tier. Both subgroups share the same lifestyle-first decision framework — but the UHNW tier commands more emphasis on community prestige, exclusivity, and access to private aviation and superyacht infrastructure.

Demographics & Psychographics

Attribute	Detail
Age Range	58–75
Net Worth	$5M–$200M+ (UHNW tier extends to $200M+)
Primary Residence	Relocating from high-cost or cold-weather markets — Northeast US, Midwest, Canada, UK, Northern Europe
Purchase Type	Primary relocation or seasonal estate with potential to become permanent primary
Transaction Speed	Moderate — 2–9 months depending on net worth tier; spouse or family co-decision common
Financing	Predominantly cash
Information Style	Clear, comparative, lifestyle-focused with supporting data; UHNW tier expects concierge-level advisory presentation
Trust Signals	Community member satisfaction, amenity quality, HOA transparency, peer group caliber

Decision Drivers & Priority Matrix

Factor	Weight	What They Evaluate
Amenity Quality	Critical	Golf course ranking, yachting/marina infrastructure, wellness campus, dining options, social programming breadth
Climate & Safety	Critical	Year-round climate quality, community security infrastructure, gated access, crime environment
Maintenance Simplicity	Critical	HOA services scope, landscape maintenance, property management infrastructure, lock-and-leave capability

Community Social Infrastructure	High	Club events, member demographics, peer group caliber, seasonal vs. full-time resident mix
Fee Transparency	High	Initiation fees, annual dues, assessment history, bundled vs. non-bundled structure
Waterfront / Marina Access	High (UHNW)	Deep-water access, slip availability, proximity to private marinas and yachting infrastructure
Healthcare Proximity	Moderate	Distance to major medical facilities, specialist availability, concierge medicine access
Value / Price Position	Moderate	Fair price relative to amenity quality; not seeking bargains but resists overpaying

Report Intelligence Specifications

Community Comparison Matrix

Side-by-side comparison of 5–8 comparable communities in the target market: initiation fee, annual dues, golf quality, yachting/marina access, wellness facilities, dining venues, social calendar breadth, seasonal mix.

All-In Cost of Ownership

Purchase price + initiation + annual dues + HOA + insurance + property tax = true annual cost. This buyer makes decisions on total cost, not sticker price.

Furnished / Turnkey Availability

What percentage of relevant inventory is furnished or turnkey? Report this for the target market's lifestyle community segment.

Climate & Safety Profile

Provide year-round climate data (temperature range, humidity, storm risk profile) and relevant community safety metrics. The UHNW retiree is relocating permanently — climate is infrastructure, not preference.

Marina & Waterfront Access Analysis

For UHNW buyers with yachting interests, map communities with deep-water access, slip availability, proximity to private marinas, and distance to open water. This is often a binary filter — either the community supports yachting or it does not.

Price Per Square Foot by Community

Comparative $/sqft across target communities enables value positioning.

DOM / Seasonal Timing

Median DOM for golf and lifestyle communities in the target market. Identify peak transaction windows to help this buyer act with confidence.

Property Filter Criteria

Attribute	Detail
Price Range	$1M–$10M+ (adjust to local luxury/lifestyle threshold; UHNW tier $4M+)
Property Type	Single Family and Condo — both relevant; single family preferred at UHNW tier

Community Type	Golf Course required; Gated preferred; Marina/Waterfront access as UHNW priority
Furnished Status	Flag Furnished and Turnkey properties
Year Built	2000+ preferred for modern amenities and lower maintenance
Key Developments (Example — Naples)	Pelican Bay, Fiddler's Creek, Lely Resort, Esplanade, Mediterra, Vineyards, Windstar, The Quarry, Tiburon, Olde Cypress, Port Royal (UHNW waterfront)

Narrative Framing

Language & Tone

Warm, consultative, and comparative at the professional tier. Elevated and aspirational at the UHNW tier — mirror the tone of a private members club or wealth advisory letter. Use phrases like 'for your lifestyle priorities, this community offers the strongest combination of...' and 'at this level, the question is not whether the amenities are excellent — it is whether the community's social fabric and peer group match your expectations.' Frame data as decision support, not sales pressure.

Key Vocabulary

lifestyle return, maintenance-free, resort-caliber amenities, social infrastructure, all-in cost, community fit, bundled value, wellness campus, move-in ready, yachting infrastructure, marina access, climate sanctuary, peer group, curated community

Avoid

investment vehicle, appreciation play, asset class, alpha, basis points, exit strategy, underwriting, starter, fixer-upper

Agent Talking Points

- There are [X] golf community transactions between [$X] and [$Y] in [year], with a median price of [$Z]. This is the most active lifestyle segment of the [market] luxury market. (Naples 2025 example: 648 transactions, $1M–$4M, median $1.675M.)
- For buyers with yachting as a lifestyle priority, [X] communities in this market offer direct deep-water access or marina proximity within [Y] minutes. We can filter specifically for properties that support a vessel of [your target size].
- The climate profile here delivers [X] days of sunshine annually with [Y] months of ideal outdoor living conditions. For buyers leaving [cold-weather market], this represents a meaningful lifestyle upgrade on a 365-day basis.
- Nearly [X]% of golf community sales in this range are furnished or turnkey. If transition simplicity matters, we can filter specifically for move-in ready properties. (Naples 2025 example: 37.8%.)
- Bundled golf communities — where membership is included — often offer a more favorable all-in cost than non-bundled communities once you factor in initiation fees separately. (Naples 2025 example: 758 bundled transactions, $460M volume.)
- Median days on market for golf communities here is [X] days. The best inventory moves quickly, particularly between [peak months]. (Naples 2025 example: 59 days vs. 68 overall.)

Sample Benchmark Data — Naples 2025

These figures are provided as a worked example using Naples 2025 transaction data (2,234 closed sales, $1M+, $6.58B total volume). Do not present these as benchmarks for any other market. The AI agent must source and substitute local data when generating reports for other markets.

Metric	Naples 2025 Benchmark
Golf Community Transactions ($1M–$4M)	648 sales, median $1.675M
Furnished/Turnkey Rate	37.8% of golf community sales
Bundled Golf Transactions	758 sales, $460M volume
Total Golf Community Volume	2,204 transactions (up 7.4% YoY)
Median DOM (Golf Communities)	59 days
Pricing Efficiency (Golf)	SP/OLP median: 0.911
Top Community (Transaction Volume)	Pelican Bay: 88 sales in segment
Waterfront / Boating Communities	319 sales, median $2.25M — deep-water access premium
Peak Season	March–June (highest transaction velocity)

PERSONA 04

The Tech Founder & Entrepreneur

Buying asymmetric opportunity. Sees what the market will value before the market does.

Profile Overview

Successful founders, early-stage investors, and tech executives who approach real estate the way they approach markets — looking for undervalued assets, emerging micro-markets, and architectural differentiation. They are drawn to new construction, modern design, and properties that stand apart from the community norm. They value connectivity, smart home infrastructure, and flex space. Many are relocating from high-tax states or countries and view the purchase as both a lifestyle upgrade and a financial optimization. They make decisions faster than most luxury buyers and prefer data presented with clarity and efficiency.

Demographics & Psychographics

Attribute	Detail
Age Range	35–55
Net Worth	$10M–$100M+
Primary Residence	Tech and innovation hubs — San Francisco, Austin, Seattle, New York, Miami, London, Tel Aviv
Purchase Type	Primary relocation or strategic secondary residence
Transaction Speed	Fast — 30–45 days when thesis is confirmed
Financing	Cash or non-traditional (stock-backed lending)
Information Style	Visual, efficient, data-dense; dislikes verbosity
Trust Signals	New construction data, design differentiation, emerging neighborhood trajectory

Decision Drivers & Priority Matrix

Factor	Weight	What They Evaluate
Design / Architecture	Critical	Modern aesthetic, impact glass, open floor plans, architectural distinction from community norm
Emerging Value	Critical	Neighborhoods or communities on an upward trajectory; pre-peak pricing data
Tax Optimization	High	Quantified tax advantage of target jurisdiction vs. origin state or country
Connectivity	High	Airport proximity, high-speed internet infrastructure, home office design
New Construction	High	2020+ builds with modern systems, smart home readiness
Lifestyle Flexibility	Moderate	Non-traditional community structures; less interested in mandatory club memberships

Report Intelligence Specifications

New Construction Price Trajectory

Volume and median price for new construction at the relevant tier in the target market. Track $/sqft growth rate for recent builds vs. older inventory in the same neighborhoods.

Emerging Micro-Market Analysis

Identify communities or neighborhoods where transaction velocity is increasing but pricing hasn't peaked. YoY growth in transaction count is the leading indicator.

Value Gap Analysis

Compare $/sqft for new construction vs. resale in the same neighborhood. Where the gap is wide, appreciation opportunity exists as the area matures.

Tax Arbitrage Quantification

Calculate annual savings from jurisdictional tax advantages (e.g., no state income tax) and express as equivalent property budget increase.

Property Filter Criteria

Attribute	Detail
Price Range	$2M–$10M (adjust to local market)
Property Type	Single Family preferred; modern condos secondary
Year Built	2018+ strongly preferred; flag 2020+ as priority
Community Type	All types — do not restrict; include non-gated and emerging developments
Windows	Impact Resistant / Modern glazing flagged as priority feature
Key Developments (Example — Naples)	Moorings, Park Shore, Pine Ridge, Isles of Collier Preserve, Caymas, Lake Park, Olde Naples, Aqualane Shores

Narrative Framing

Language & Tone

Direct, efficient, and forward-looking. Mirror the cadence of a market research brief. Use phrases like 'this micro-market is in early innings' or 'the value gap between new construction and resale here represents asymmetric upside.' Keep it concise.

Key Vocabulary

asymmetric opportunity, first-mover advantage, value gap, emerging trajectory, design-forward, tax arbitrage, modern infrastructure, price discovery, early innings, flex space, connectivity

Avoid

traditional charm, classic elegance, established prestige, country club lifestyle, maintenance-free living, resort-style amenities

Agent Talking Points

- [X] new construction transactions ($[Y]M+) closed in [year] with a $[Z]M median price. [Top 3 communities] are leading this cycle — established locations getting new architectural product. (Naples 2025 example: 235 transactions, $4.6M median; Moorings, Park Shore, Pine Ridge.)

- [X]% of all luxury transactions in [year] are new construction. The $/sqft premium for new builds over resale in the same area quantifies the design and efficiency premium the market is paying. (Naples 2025 example: 21%.)
- Non-gated communities accounted for [X] transactions. If you're looking for flexibility without mandatory club structures, there's a deeper market than most people realize. (Naples 2025 example: 471 transactions.)
- The single-family segment grew [X]% YoY in total volume to $[Y]B. Capital is flowing into single-family luxury at a rate that outpaces the condo market. (Naples 2025 example: +14.8% to $6.73B; condo market down 17.2%.)
- The tax arbitrage — eliminating [origin state/country] income tax — can effectively add $[X]–$[Y]M in purchasing power depending on income. We can model this precisely for your situation.

Sample Benchmark Data — Naples 2025

These figures are provided as a worked example using Naples 2025 transaction data (2,234 closed sales, $1M+, $6.58B total volume). Do not present these as benchmarks for any other market. The AI agent must source and substitute local data when generating reports for other markets.

Metric	Naples 2025 Benchmark
New Construction ($2M+) Transactions	235 sales, median $4.6M, median 4,043 sqft
New Construction Top Communities	Moorings (19), Park Shore (18), Pine Ridge (17), Isles of Collier Preserve (15)
Non-Gated Transactions	471 sales (21.1% of market)
SFH Market Growth	Volume up 14.8% YoY to $6.73B
Condo Market Decline	Volume down 17.2% YoY
Peak Transaction Months	March–June, with October showing 34.75% YoY surge

PERSONA 05

The Seasonal & Second-Home Buyer

Optimizing for utilization: four months of perfection, eight months of passive income potential.

Profile Overview

This buyer is acquiring a property they will use personally for 2–5 months per year and may rent or leave vacant for the remainder. They prioritize lock-and-leave simplicity, proximity to airports and dining, and low management burden. Condos and turnkey single-family homes in managed communities are their primary targets. They evaluate the property on a 'cost per month of use' basis and consider rental offset potential. Common in markets that attract seasonal migration — coastal, mountain, and resort destinations.

Demographics & Psychographics

Attribute	Detail
Age Range	50–70
Net Worth	$5M–$25M
Primary Residence	Cold-weather or high-cost primary markets — Northeast US, Midwest, Canada, Northern Europe
Purchase Type	Secondary/seasonal residence
Transaction Speed	Moderate — often decided during a single season visit
Financing	Predominantly cash; some financing for tax optimization
Information Style	Practical, comparative, cost-focused
Trust Signals	Property management infrastructure, HOA quality, rental performance data

Decision Drivers & Priority Matrix

Factor	Weight	What They Evaluate
Lock-and-Leave Simplicity	Critical	On-site management, storm/hurricane/winter prep services, security during absence
Furnished / Turnkey	Critical	Move-in ready with quality furnishings; relevant in markets where furnished inventory is common
Rental Potential	High	Community rental policies, seasonal rental yield estimates, management options
Airport Proximity	High	Travel time to nearest regional and major airports for ease of seasonal migration
Cost Per Month of Use	High	Total annual cost / months of personal use = primary decision metric
Dining / Entertainment	Moderate	Walking distance or short drive to restaurants, shops, beach or resort access

Report Intelligence Specifications

Condo / Turnkey Market Analysis

Volume, median price, and furnished/turnkey rate for the relevant property type in the target market's seasonal segment.

Seasonal Transaction Patterns

Map transaction volume by month to identify when seasonal buyers are most active and when pricing may be most competitive.

Total Cost of Ownership

Purchase price + HOA + insurance + property tax + property management fee = true annual carrying cost. Express as 'cost per month of use' at different utilization rates.

Community Rental Policy Analysis

Not all communities allow short-term rentals. Map rental restrictions by community to ensure the buyer's rental offset strategy is viable.

Furnished Premium Analysis

Calculate the price premium for furnished/turnkey vs. unfurnished in the same community. Quantify the cost-benefit of buying furnished vs. furnishing independently.

Property Filter Criteria

Attribute	Detail
Price Range	$1M–$3M (adjust to local market — resort markets may be higher)
Property Type	Condo primary; Turnkey Single Family secondary
Furnished Status	Furnished and Turnkey flagged as priority
Community Type	Managed communities; beach, golf, or resort-proximate
Rental Allowed	Flag communities with favorable rental policies
Key Developments (Example — Naples)	Pelican Bay, Park Shore, Vanderbilt Beach, Moorings, Olde Naples, Tiburon, The Dunes, Talis Park, Barefoot Beach

Narrative Framing

Language & Tone

Practical and advisory. Mirror the tone of a financial planner helping someone optimize a major lifestyle purchase. Use phrases like 'at 4 months of personal use, your effective cost per month is...' and 'with seasonal rental offset, your net carrying cost decreases to...' Make the economics tangible.

Key Vocabulary

utilization rate, carrying cost, rental offset, lock-and-leave, seasonal arbitrage, cost per use, management infrastructure, turnkey, travel accessibility, usage optimization

Avoid

investment thesis, alpha generation, basis points, compound potential, legacy asset, generational wealth

Agent Talking Points

- [X] condos/turnkey properties sold between [$A] and [$B] in [year], with [Y]% delivered furnished or turnkey. This market is structured for seasonal buyers who want to arrive and start living immediately. (Naples 2025 example: 503 condos, $1M–$3M, 48.1% turnkey.)
- [Top community] leads the seasonal segment with [X] transactions. [Communities 2–4] follow with [Y], [Z], [W] sales respectively. Each offers a different lifestyle and price profile.
- At a [$X] purchase price with typical carrying costs, your cost per month at 4 months of personal use is approximately $[Y]–$[Z]. With rental offset, that could drop to $[A]–$[B]. (Naples 2025 example: $1.5M purchase, ~$12K–$15K/month, ~$7K–$10K with rental offset.)
- Seasonal transaction patterns peak [peak months] in this market, meaning the best inventory gets absorbed quickly. Buyers who look in the off-season ([off months]) typically find more negotiating leverage.
- The condo market [grew/declined] [X]% in total volume YoY while single-family [grew/declined] [Y]%. Understand this dynamic before advising on product type — volume shifts create negotiating opportunity.

Sample Benchmark Data — Naples 2025

These figures are provided as a worked example using Naples 2025 transaction data (2,234 closed sales, $1M+, $6.58B total volume). Do not present these as benchmarks for any other market. The AI agent must source and substitute local data when generating reports for other markets.

Metric	Naples 2025 Benchmark
Condo Transactions ($1M–$3M)	503 sales, median $1.5M
Furnished/Turnkey Rate (Condos)	48.1%
Top Condo Communities	Pelican Bay (120), Park Shore (70), Vanderbilt Beach (36), Moorings (32), Olde Naples (32)
Condo Market Volume Change	Down 17.2% YoY (buyer opportunity)
Boating Community Transactions	319 sales, median $2.25M
Peak Transaction Months	March–April (highest volume)
Off-Season Window	July–September (lowest volume, potential negotiating leverage)
Median DOM (Overall Market)	68 days

PERSONA 06

The International Buyer

Global capital seeking stable, dollar-denominated real estate in a tax-efficient jurisdiction.

Profile Overview

This buyer is deploying capital from outside the United States (or outside the target country), often from Latin America, Canada, Europe, or the Middle East. They are motivated by currency diversification, political stability, lifestyle quality, and tax efficiency. They frequently purchase through LLCs or trust structures for privacy and estate planning. Property management is critical since they may visit only 4–8 weeks per year. They are cash buyers by necessity (foreign nationals face restrictive financing), and they prioritize turnkey properties in managed communities with strong security infrastructure.

Demographics & Psychographics

Attribute	Detail
Age Range	40–65
Net Worth	$10M–$100M+
Primary Residence	São Paulo, Mexico City, Bogotá, Toronto, London, Munich, Riyadh, Dubai
Purchase Type	Diversification asset; may become seasonal or eventual primary
Transaction Speed	Moderate to slow — legal/tax structuring adds 30–90 days to timeline
Financing	Cash (near 100% for foreign nationals)
Information Style	Professional, structured, emphasizing legal and tax framework
Trust Signals	Established international buyer community, property management quality, legal infrastructure

Decision Drivers & Priority Matrix

Factor	Weight	What They Evaluate
Currency Diversification	Critical	USD or target currency-denominated asset as hedge against home currency volatility
Privacy & Legal Structure	Critical	LLC purchase options, cross-border tax considerations, estate planning across jurisdictions
Property Management	Critical	Full-service management for absentee ownership; weather preparation, maintenance, security
Security & Gated Access	High	Physical security infrastructure; concierge services; monitored communities
Airport Connectivity	High	Direct flight availability from origin city to target market airports
Turnkey Delivery	High	Furnished, operational, with management in place on closing day

Report Intelligence Specifications

Cash Transaction Analysis

What percentage of luxury transactions in the target market are cash? Report by price tier. High cash rates signal a market that aligns with international buyer capabilities.

Managed Community Inventory

Identify communities with on-site or contracted property management, weather preparation services, and absentee owner support infrastructure.

Security Infrastructure Scoring

Rate communities on gated access, 24/7 security, camera systems, and visitor management protocols.

Comparable International Market Benchmarking

$/sqft comparison vs. comparable properties in other international destinations competing for the same capital (e.g., Miami, Turks & Caicos, Bahamas, Portugal, UAE).

Cross-Border Tax Considerations

Note relevant withholding or cross-border tax implications for foreign sellers in the target jurisdiction. Include in total return calculations.

Property Filter Criteria

Attribute	Detail
Price Range	$2M–$10M (adjust to local market)
Property Type	Condo and Single Family (condo preferred for management simplicity)
Community Type	Gated required; Boating and Tennis as bonus
Furnished Status	Furnished and Turnkey only
Security	Gated communities with documented security infrastructure
Key Developments (Example — Naples)	Pelican Bay, Park Shore, Moorings, Vanderbilt Beach, Barefoot Beach, Port Royal, Olde Naples

Narrative Framing

Language & Tone

Professional and globally contextual. Mirror the tone of a private banking advisory letter. Reference global market comparisons naturally. Use phrases like 'in the context of comparable dollar-denominated luxury markets' and 'from a portfolio diversification perspective.' Assume financial sophistication but do not assume familiarity with the local market.

Key Vocabulary

global diversification, dollar-denominated asset, currency hedge, absentee ownership, entity structure, cross-border tax considerations, managed community, turnkey delivery, security infrastructure, international capital flow

Avoid

local flavor, community potluck, neighborhood charm, school system, family-friendly neighborhood events

Agent Talking Points

- [Target market] luxury market operates at [X]% cash. This is a cash market, which aligns with how international buyers transact and eliminates financing friction entirely. (Naples 2025 example: 86.7%, rising to 91% at $10M+.)
- [X]% of luxury transactions occur within gated communities with security infrastructure. The security framework here is built into the community fabric. (Naples 2025 example: 89.1%.)
- From a global benchmarking perspective, [target market] luxury $/sqft at the [top tier] remains competitive with comparable [waterfront/mountain/urban] markets. We can model this against whichever markets you're also evaluating. (Naples 2025 example: $1,499/sqft at $6M–$10M.)
- We work with international tax counsel and can coordinate on entity structuring, cross-border tax planning, and management setup so that the property is fully operational and tax-optimized from day one.
- The [waterfront/boating/resort] community segment — [X] transactions at a $[Y]M median — offers [lifestyle feature] within gated, managed environments. (Naples 2025 example: 319 boating community transactions, $2.25M median.)

Sample Benchmark Data — Naples 2025

These figures are provided as a worked example using Naples 2025 transaction data (2,234 closed sales, $1M+, $6.58B total volume). Do not present these as benchmarks for any other market. The AI agent must source and substitute local data when generating reports for other markets.

Metric	Naples 2025 Benchmark
Cash Transaction Rate	86.7% luxury, 91.1% ultra-luxury
Gated Community Penetration	89.1% of luxury transactions
Boating Community Transactions	319 sales, median $2.25M
Furnished/Turnkey (Condos)	48.1% of condo sales
Price Per Sqft ($6M–$10M)	$1,499 median
Total Market Volume ($1M+)	$6.58B across 2,234 transactions
Ultra-Luxury ($10M+)	79 transactions, $1.39B volume
Peak Season	January–April (highest international buyer activity)

PERSONA 07

The Celebrity / Public Figure

Every transaction is a trust transaction. Discretion is the product.

Profile Overview

Athletes, entertainers, high-profile founders, and public figures whose name recognition creates unique vulnerabilities in the real estate process. Privacy, security, and discretion are not preferences — they are non-negotiable operating requirements. The transaction itself must be as protected as the property. Off-market access, NDA execution, and confidential showing protocols are the baseline. In many cases, the public figure does not participate directly in early-stage property evaluation — that role falls to a trusted inner circle.

A key distinction in this persona: the actual buyer decision-making is frequently delegated to or filtered through a business manager, entertainment attorney, or family office equivalent operating on the principal's behalf. This representative functions like a family office — evaluating properties through both lifestyle and asset management lenses, managing the transaction logistics, and serving as the primary point of contact with the listing agent. The agent relationship is built with the representative first, and with the principal second.

Demographics & Psychographics

Attribute	Detail
Age Range	25–55 (principal); representative is often 40–60
Net Worth	$10M–$500M+
Primary Residence	Los Angeles, New York, Miami, Nashville, London, Dubai
Purchase Type	Primary or secondary residence; often multiple properties across markets
Transaction Speed	Variable — fast when the thesis is confirmed; delayed by trust-building and legal structuring
Financing	Cash; often purchased via LLC, trust, or holding company
Information Style	Representative: analytical and transactional. Principal: experiential and emotional. Tailor to who is in the room.
Trust Signals	NDA execution, off-market track record, confidential showing protocols, discretion reputation

Decision Drivers & Priority Matrix

Factor	Weight	What They Evaluate
Privacy	Critical	Gated access, lot size/buffer, no street visibility, no public-facing listing history
Security Infrastructure	Critical	Perimeter security, camera systems, safe rooms, private entry points, security team accommodation
Off-Market Access	Critical	Properties that have never been publicly listed; pocket listings; agent-to-agent relationships

NDA & Discretion Protocol	Critical	Signed NDA before any property details shared; controlled information flow; no social media disclosure
Representative Relationship	High	Business manager, entertainment attorney, or family office rep must be engaged and trusted first
Lifestyle Fit	High	Property must match the principal's personal aesthetic and lifestyle — often communicated through the representative
Asset Management Lens	Moderate	Representative will often evaluate appreciation potential, carrying cost, and exit optionality alongside lifestyle metrics

Report Intelligence Specifications

Reports for this persona are typically delivered to the representative, not the principal. Format accordingly.

Off-Market Inventory Access

Quantify what percentage of transactions in the target price tier occur off-market or through agent-to-agent channels. This buyer's access depends on the agent's network depth, not public listing systems.

Privacy & Security Community Scoring

Rate target communities on: single point of entry, perimeter security, lot size/buffer from neighbors, deed restriction on photography, HOA rules on third-party access. Flag communities where resident lists or transaction details are not publicly recorded.

LLC / Trust Transaction Analysis

What percentage of comparable transactions in this price range occur through entity structures (LLC, trust, holding company)? High rates signal a market infrastructure that accommodates privacy-forward ownership.

Comparable Confidential Transactions

Build a comp set from transactions where the end buyer is not publicly disclosed. These are often the most relevant comparables for this persona — and the hardest to source.

Property Filter Criteria

Attribute	Detail
Price Range	$3M–$30M+ (adjust to target market)
Property Type	Single Family strongly preferred; penthouse condo with dedicated private elevator acceptable
Community Type	Gated with single-entry preferred; estate lots with significant buffer; no through-traffic
Lot Size	0.5+ acres preferred; buffer from neighbors and street essential
Year Built	2010+ preferred; modern security infrastructure
Key Developments (Example — Naples)	Port Royal, Aqualane Shores, Pine Ridge, Pelican Bay (select enclaves)

Working with the Representative (Business Manager Protocol)

When the contact is a business manager or entertainment attorney acting on behalf of a public figure principal, the agent dynamic shifts significantly. The representative is evaluating the agent as much as the property.

- Lead with your discretion track record and off-market access — not with inventory.
- Execute NDA before sharing any property details, including price and address.
- Treat the representative as the decision-maker for process and logistics; treat the principal as the decision-maker for lifestyle fit.
- The representative will often introduce ROI, carrying cost, and asset management questions alongside privacy and lifestyle criteria — be prepared to address both.
- Communication preference: direct, efficient, and confidential. No group texts, no CC'd emails, no DocuSign with shared inboxes. Ask how they prefer to communicate before sending anything.
- Timeline is controlled by the representative's availability, not the market. Patience and responsiveness are the primary service signals.

Narrative Framing

Language & Tone

Understated and completely devoid of any language that references the principal's public identity. Never reference their profession, celebrity, or public profile in written materials. With the representative: direct and operational. With the principal (if engaged): experiential and aesthetic — focus on how the property feels, not what it costs.

Key Vocabulary

discretion, off-market, confidential, privacy protocol, gated, exclusive access, NDA, entity purchase, principal, representative, lifestyle alignment, security infrastructure

Avoid

celebrity, famous, well-known, high-profile (in written materials), social media worthy, Instagram moment, show-stopping, neighborhood buzz

Agent Talking Points

- [X]% of $[Y]M+ transactions in this market are completed through LLC or trust structures. The ownership privacy infrastructure is already built into how this market transacts. (Naples 2025 example: significant entity purchase prevalence at $5M+.)
- Our off-market pipeline includes properties that have never appeared on MLS or any public platform. We can share specifics under NDA — let's execute that first.
- [Top communities] offer the strongest combination of perimeter security, gated single-entry access, and lot sizes that provide meaningful buffer from neighboring properties.
- I work directly with your principal's security team to coordinate any property visits. Site assessment, advance walkthroughs, and press-free access are standard in how we operate.
- On the asset side: comparable transactions in this tier show [X]% appreciation over [Y] years, with [Z]% of holdings transacted off-market at closing — exit optionality is intact for when the time comes.

Sample Benchmark Data — Naples 2025

These figures are provided as a worked example using Naples 2025 transaction data (2,234 closed sales, $1M+, $6.58B total volume). Do not present these as benchmarks for any other market. The AI agent must source and substitute local data when generating reports for other markets.

Metric	Naples 2025 Benchmark
Ultra-Luxury Transactions ($5M+)	Significant entity/LLC purchase prevalence — exact rate varies by market
Gated Community Penetration	89.1% of luxury transactions — highest tier skews higher
Off-Market Transaction Rate	Varies by market; Naples agent-to-agent channel active at $10M+
Large Lot Availability ($5M+, 0.5+ acres)	Premium inventory — Port Royal, Pine Ridge, Aqualane Shores
Cash Transaction Rate ($10M+)	91.1% — aligns with entity purchase structure
Average Lot Size ($10M+)	0.65+ acres in top communities

PERSONA 08

The Corporate Executive & C-Suite Relocator

Time is the scarcest asset. The transaction needs to be as efficient as the decision.

Profile Overview

Active C-suite executives, often still in peak earning years, who are relocating to a new primary market or establishing a significant secondary home tied to strategic reasons — tax domicile optimization, proximity to key operations, or quality of life for family. They operate on compressed timelines, delegate heavily, and expect the same caliber of advisory service they receive from investment bankers and management consultants. They prioritize proximity to private aviation, home office infrastructure, and security that provides privacy without isolation.

Demographics & Psychographics

Attribute	Detail
Age Range	42–60
Net Worth	$10M–$75M
Primary Residence	Relocating from major business centers — New York, Chicago, Dallas, San Francisco, London, Atlanta
Purchase Type	Primary residence relocation or executive-grade secondary home
Transaction Speed	Very fast — 20–45 day decision cycle; expects institutional-grade efficiency
Financing	Cash or corporate relocation packages; some stock-backed lending
Information Style	Executive summary format; key findings first, supporting data on demand
Trust Signals	Market positioning data, comparable executive relocations, transaction efficiency track record

Decision Drivers & Priority Matrix

Factor	Weight	What They Evaluate
Transaction Efficiency	Critical	Speed to close, clean comparable data, pre-vetted options that match specifications precisely
Private Aviation Access	Critical	Drive time to nearest private aviation facility; FBO quality; hangar availability
Home Office Quality	High	Dedicated office space, connectivity infrastructure, video-conference-grade environment
Privacy Without Isolation	High	Gated security but not remote; proximity to dining, culture, and business services
Family Infrastructure	High	School quality (if applicable), family recreation, proximity to healthcare
Turnkey Quality	Moderate	Prefers new or recently renovated; low tolerance for project management burden

Report Intelligence Specifications

Transaction Velocity Analysis

DOM by price tier and community in the target market. This buyer wants to know where well-priced properties move quickly — identify those communities specifically.

SP/OLP Pricing Efficiency

Identify communities with tight SP/OLP ratios as signals of efficient, well-functioning markets. Report by price tier in the target market.

Aviation Proximity Scoring

Drive time from target communities to the nearest private aviation facility and major commercial airport. Map communities within a 15-minute radius of the primary private aviation hub.

New Construction Availability ($3M+)

Identify 2020+ builds in prime locations with modern home office infrastructure and turnkey quality — the product this buyer seeks.

Executive Relocation Comparable Analysis

Filter for recent transactions in the target price range in communities near the private aviation hub with new construction, 3,500+ sqft, and dedicated office space.

Property Filter Criteria

Attribute	Detail
Price Range	$3M–$15M (adjust to local market)
Property Type	Single Family strongly preferred
Year Built	2015+ preferred; 2020+ weighted heavily
Living Area	3,500+ sqft minimum
Private Pool	Required in applicable markets
Community Type	Gated; proximity to private aviation within 15 minutes
Key Developments (Example — Naples)	Moorings, Park Shore, Pine Ridge, Pelican Bay, Grey Oaks, Olde Naples, Aqualane Shores, Port Royal

Narrative Framing

Language & Tone

Executive briefing format. Mirror the structure of a McKinsey or Goldman deliverable: executive summary up front, key findings with supporting evidence, recommendations with clear rationale. No fluff. Every sentence should earn its place in the document.

Key Vocabulary

market positioning, transaction efficiency, comparable analysis, executive summary, strategic relocation, aviation proximity, pricing discipline, pre-vetted, turnkey execution, compressed timeline

Avoid

take your time, explore the options, leisurely, charming neighborhood, hidden gem, up-and-coming area, fixer-upper potential

Agent Talking Points

- Properties priced within 97–100% of fair market value sell in a median of [X] days in your target communities. Strategic pricing is the strongest velocity lever — we identify which listings are positioned for efficient transactions. (Naples 2025 example: 30–45 days for well-priced properties.)
- [Private aviation hub] is [X] minutes from [top 3–4 communities near airport]. For executives who travel weekly, aviation proximity is a non-negotiable infrastructure requirement — these communities deliver it. (Naples 2025 example: Naples Municipal Airport, 10–15 min from Moorings, Park Shore, Pelican Bay, Olde Naples.)
- In the [$X]–[$Y] single-family segment, 2020+ construction in prime locations offers modern home office infrastructure, impact-resistant windows, and turnkey quality. [Top 3 communities] lead this inventory. (Naples 2025 example: Moorings, Park Shore, Pine Ridge.)
- Buyer negotiability at the luxury tier is [X]% on average. At ultra-luxury, it's [Y]%. Your price point may offer more room to negotiate than buyers at lower tiers typically expect. (Naples 2025 example: 8.1% luxury, 12.9% ultra-luxury.)
- We structure our advisory process like a strategic engagement: intake call to define specifications, curated shortlist of 3–5 pre-vetted properties with full comparable analysis, and an optimized visit schedule designed to support a confident decision within one trip.

Sample Benchmark Data — Naples 2025

These figures are provided as a worked example using Naples 2025 transaction data (2,234 closed sales, $1M+, $6.58B total volume). Do not present these as benchmarks for any other market. The AI agent must source and substitute local data when generating reports for other markets.

Metric	Naples 2025 Benchmark
SFH Transaction Volume	1,586 sales (71% of luxury market)
New Construction ($3M+) in Prime	Moorings (19), Park Shore (18), Pine Ridge (17)
Median DOM by Price Tier	$2M–$4M: 72 days | $4M–$6M: 90 days | $6M–$10M: 98 days
SP/OLP Ratio ($6M–$10M)	0.919 median (tightest in market)
Buyer Negotiability	Luxury: 8.1% | Ultra-luxury: 12.9%
Private Pool Prevalence ($6M+)	77–90.5%
Gated Community Penetration	89.1%
Peak vs. Off-Season Volume	April: 268 sales | September: 159 sales

Appendix A: Multi-Persona Blending Rules

When a purchasing agent selects multiple personas (up to 3), the AI agent should follow these blending rules.

1. Metric Union

Include all Primary Metrics from all selected personas. Where metrics overlap, use the version with the most detailed specification.

2. Filter Intersection

Apply the most restrictive filter set that still captures the target buyer. Adjust all price tier thresholds to reflect the local market definition of luxury.

3. Narrative Hierarchy

Use the first-selected persona's tone as the primary voice. Incorporate vocabulary from secondary personas where natural. Never mix institutional tone (Persona 01) with lifestyle tone (Persona 03) in the same paragraph.

4. Talking Points

Generate blended talking points that address the overlapping concerns of all selected personas. Maximum 7 talking points in any blended report. Rebuild all talking points using target market data.

5. De-Emphasis Conflicts

If a metric is emphasized by one persona but de-emphasized by another, include it but position it as secondary context rather than primary analysis.

Appendix B: Market Calibration Requirements

All sample benchmarks in this document use Naples 2025 data (2,234 closed transactions, $6.58B volume, $1M+ threshold). When the AI agent generates reports for any other market, the following recalibration steps are required.

1. Price Tier Boundaries

Adjust price tiers based on local luxury market definitions. The $1M threshold may be $500K in some markets or $2M+ in others.

2. Cash Transaction Rates

Naples' 86.7% cash rate is exceptionally high. Most markets will show 40–70% cash at luxury tiers. Adjust language and framing accordingly.

3. Seasonality Patterns

Naples peaks March–June. Other markets have different seasonal rhythms (Aspen: December–March, Hamptons: May–August, urban markets: year-round). Recalibrate all seasonal guidance.

4. Community Types

Gated golf communities dominate Naples. Other markets may be structured around ski-in/ski-out, waterfront, urban high-rise, or ranch properties. Adjust community type filters to local equivalents.

5. DOM Benchmarks

Naples' 65–101 day median DOM range may not apply elsewhere. Recalibrate 'fast' and 'slow' thresholds based on local market velocity.

6. Property Type Mix

Naples is 71% single-family at luxury tier. Manhattan is nearly 100% condo. Adjust property type emphasis based on local inventory composition.

7. Key Developments

All community names listed in property filter sections are Naples examples. Substitute the equivalent prestige communities in the target market.
